About Me

I'm a **Mathematics** graduate from Universitas Pendidikan Indonesia with an interest in data analytics and business problem-solving.

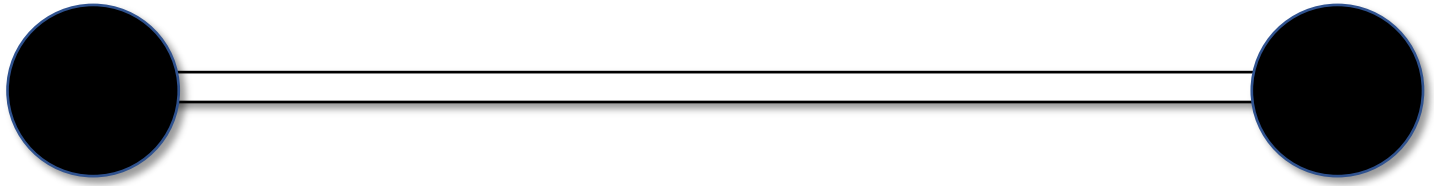

I gained experience at **Otoritas Jasa Keuangan** (OJK) and the **Ministry of Finance**, where I developed my attention to **detail**, **data management**, and **accuracy**. I'm currently interning at StatsMe as a **Data Analyst Support**, gaining practical experience in a professional environment.

I've also worked on data analytics projects using **SQL**, **Excel**, **BigQuery**, **Tableau**, and **Looker Studio**, focusing on **data preparation**, **analysis**, and **visualization** to understand business performance.

Projects

Kimia Farma Performance Analytics

2020 – 2023 | Bigquery, SQL, Looker Studio

Analyzed sales, profitability, transaction patterns, and branch performance by transforming four datasets into a single analytical table.

Repository HERE!

Superstore Sales & Profit Analysis

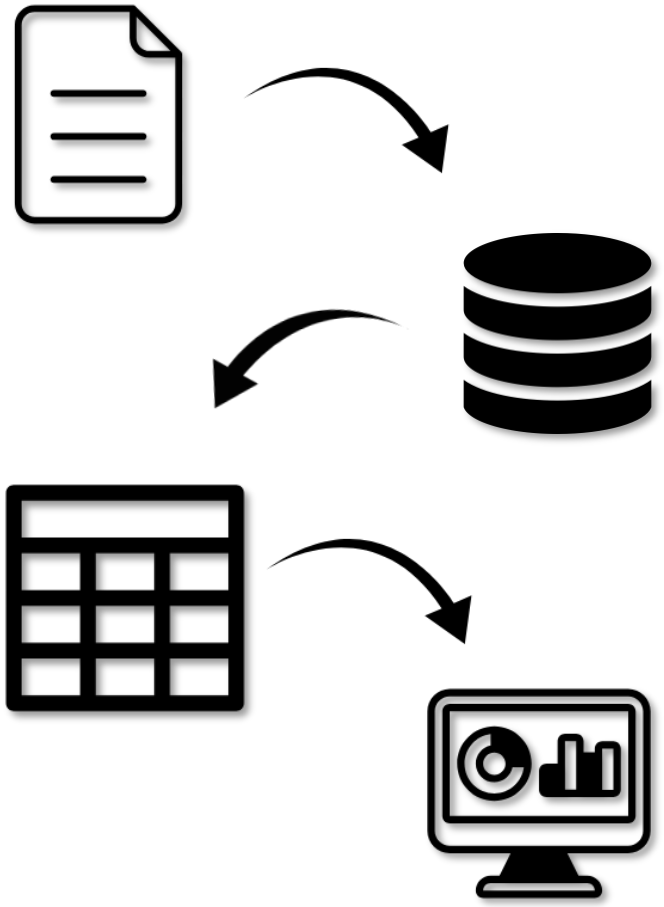

2014 – 2017 |SQLite, Tableau Public

Explored retail sales and profit performance across product sub-categories, U.S. states, and monthly sales trends.

Repository HERE!

Kimia Farma: Project Overview

Analyzed Kimia Farma's business performance from 2020 to 2023 using Google BigQuery and Looker Studio.
The project focused on transforming transaction and reference data into useful business metrics, including nett sales, profit, and branch performance.

Business Questions

1. How did sales and profit perform from 2020 to 2023?
2. Which provinces contributed the most to sales and transactions?
3. Which branches had high branch ratings but relatively low transaction ratings?
4. How was profit distributed across Indonesia?

Tools: Google BigQuery, SQL, Looker Studio

Kimia Farma: Data Transformation

Data Available

kf_final_transaction.csv

- Transaction_id
- Date
- Branch_id
- Customer_name
- Product_id
- Price
- Discount_percentage
- Rating

kf_inventory.csv

- Inventory_ID
- Branch_id
- Product_id
- Product_name
- Opname_stock

kf_kantor_cabang.csv

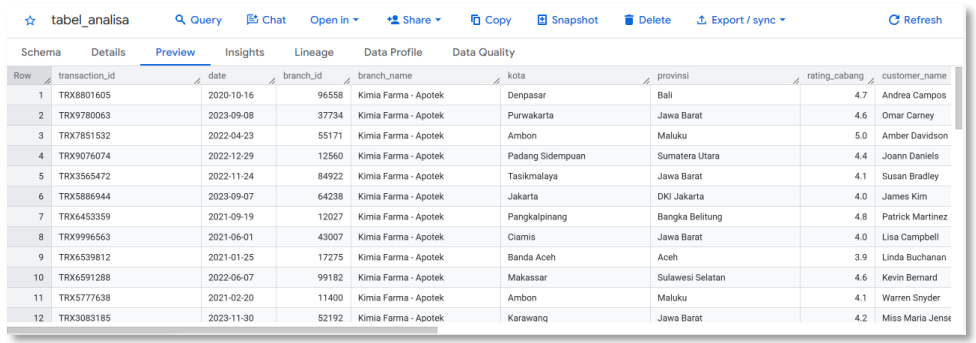

- Branch_id
- Branch_category
- Branch_name
- Kota
- Provinsi
- Rating

kf_product.csv

- Product_id
- Product_name
- Product_category
- Price

Process

1. Imported four datasets into Google BigQuery.
2. Combined the datasets using SQL joins.
3. Calculated nett sales, gross profit percentage, and estimated net profit.
4. Created a single analytical table for reporting.
5. Connected the final table to Looker Studio.

Row	transaction_id	date	branch_id	branch_name	kota	provinsi	rating_cabang	customer_name
1	TRX8801605	2020-10-16	96558	Kimia Farma - Apotek	Denpasar	Bali	4.7	Andrea Campos
2	TRX9780063	2023-09-08	37734	Kimia Farma - Apotek	Purwakarta	Jawa Barat	4.6	Omar Carney

5	TRX3565472	2022-11-24	84922	Kimia Farma - Apotek	Tasikmalaya	Jawa Barat	4.1	Susan Bradley
6	TRX5886944	2023-09-07	64238	Kimia Farma - Apotek	Jakarta	DKI Jakarta	4.0	James Kim
7	TRX6453359	2021-09-19	12027	Kimia Farma - Apotek	Pangkalpinang	Bangka Belitung	4.8	Patrick Martinez
8	TRX9996563	2021-06-01	43007	Kimia Farma - Apotek	Ciamis	Jawa Barat	4.0	Lisa Campbell
9	TRX6539812	2021-01-25	17275	Kimia Farma - Apotek	Banda Aceh	Aceh	3.9	Linda Buchanan
10	TRX6591288	2022-06-07	99182	Kimia Farma - Apotek	Makassar	Sulawesi Selatan	4.6	Kevin Bernard
11	TRX5777638	2021-02-20	11400	Kimia Farma - Apotek	Ambon	Maluku	4.1	Warren Snyder
12	TRX3083185	2023-11-30	52192	Kimia Farma - Apotek	Karawang	Jawa Barat	4.2	Miss Maria Jense

Output: One analytical table used for business performance analysis and dashboard visualization.

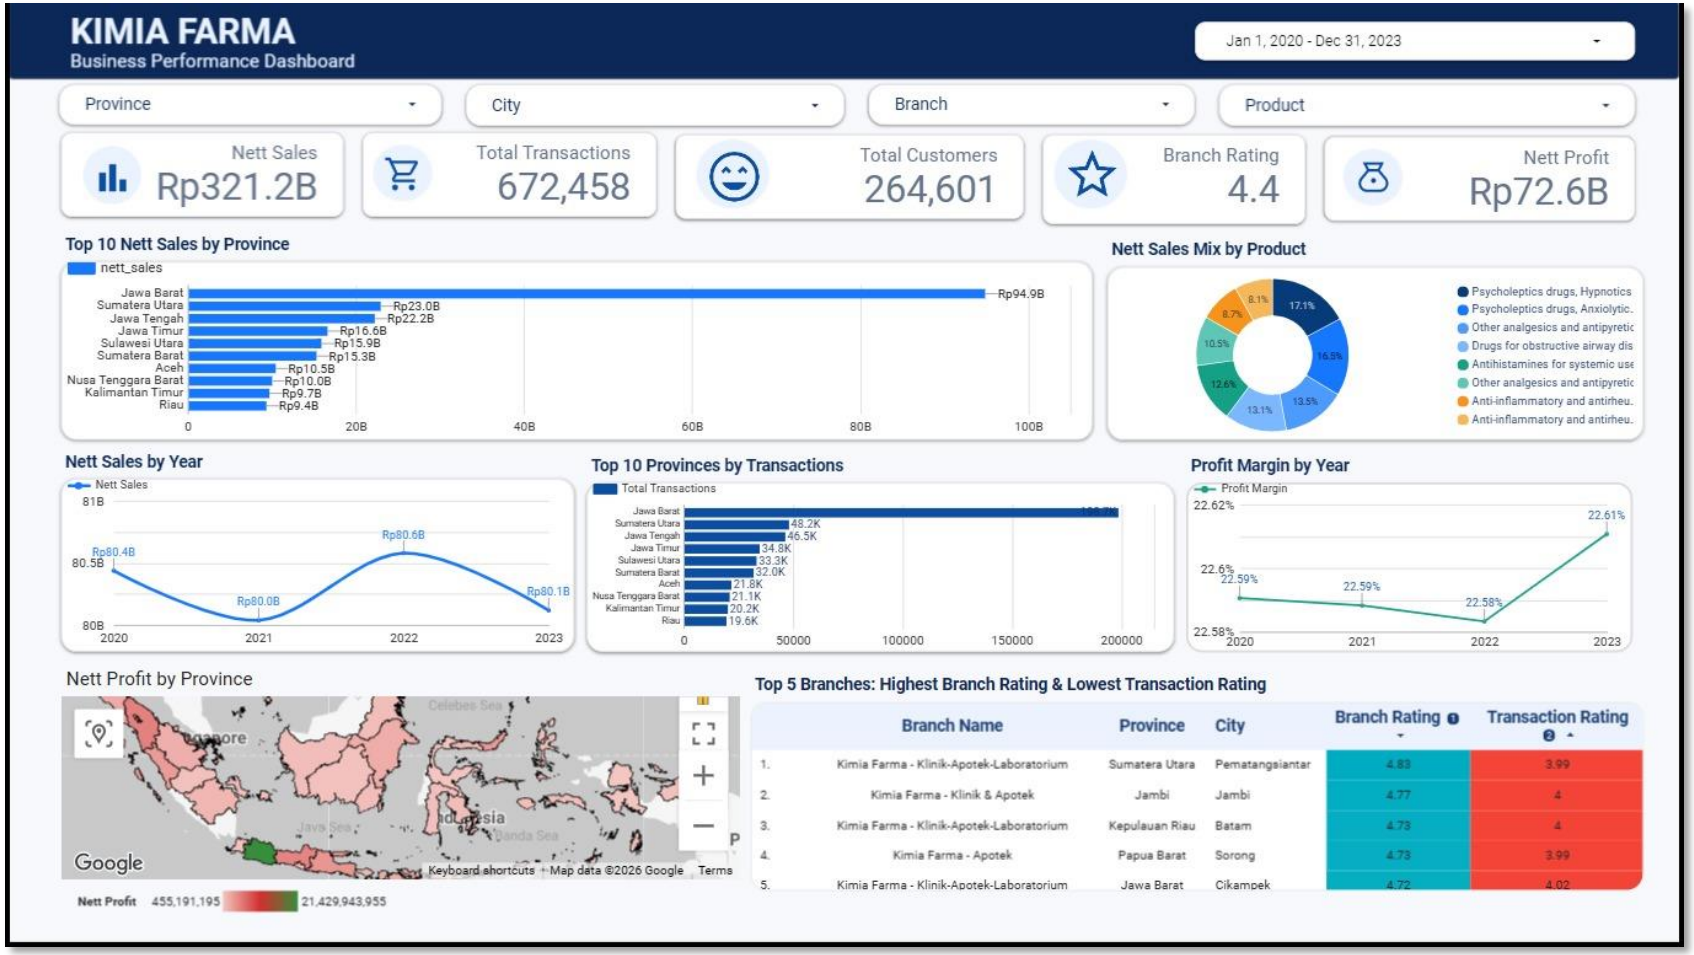

Kimia Farma: Dashboard & insights

Key Findings

- Jawa Barat recorded the highest nett sales, approximately Rp94.9B.
- Sales and profit remained relatively stable across the four-year period.
- Differences between branch ratings and transaction ratings highlight areas worth investigating further.

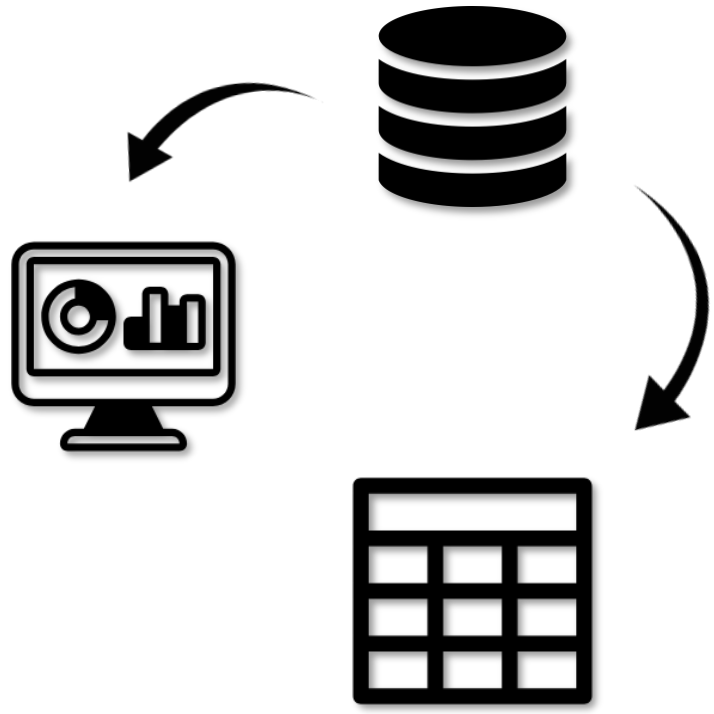

Recommendation

Review branches with weaker transaction ratings and investigate opportunities to improve customer experience.

Superstore: Project Overview

Explored retail sales and profitability using the Sample Superstore dataset covering transactions from 2014 to 2017. I used SQLite to analyze sales trends, product performance, and profitability across U.S. states before creating an interactive Tableau dashboard.

Business Questions

1. How did monthly sales change over the four-year period?
2. Which product sub-categories generated the highest profits and losses?
3. How did profitability differ across states?

Tools: SQLite, Tableau Public

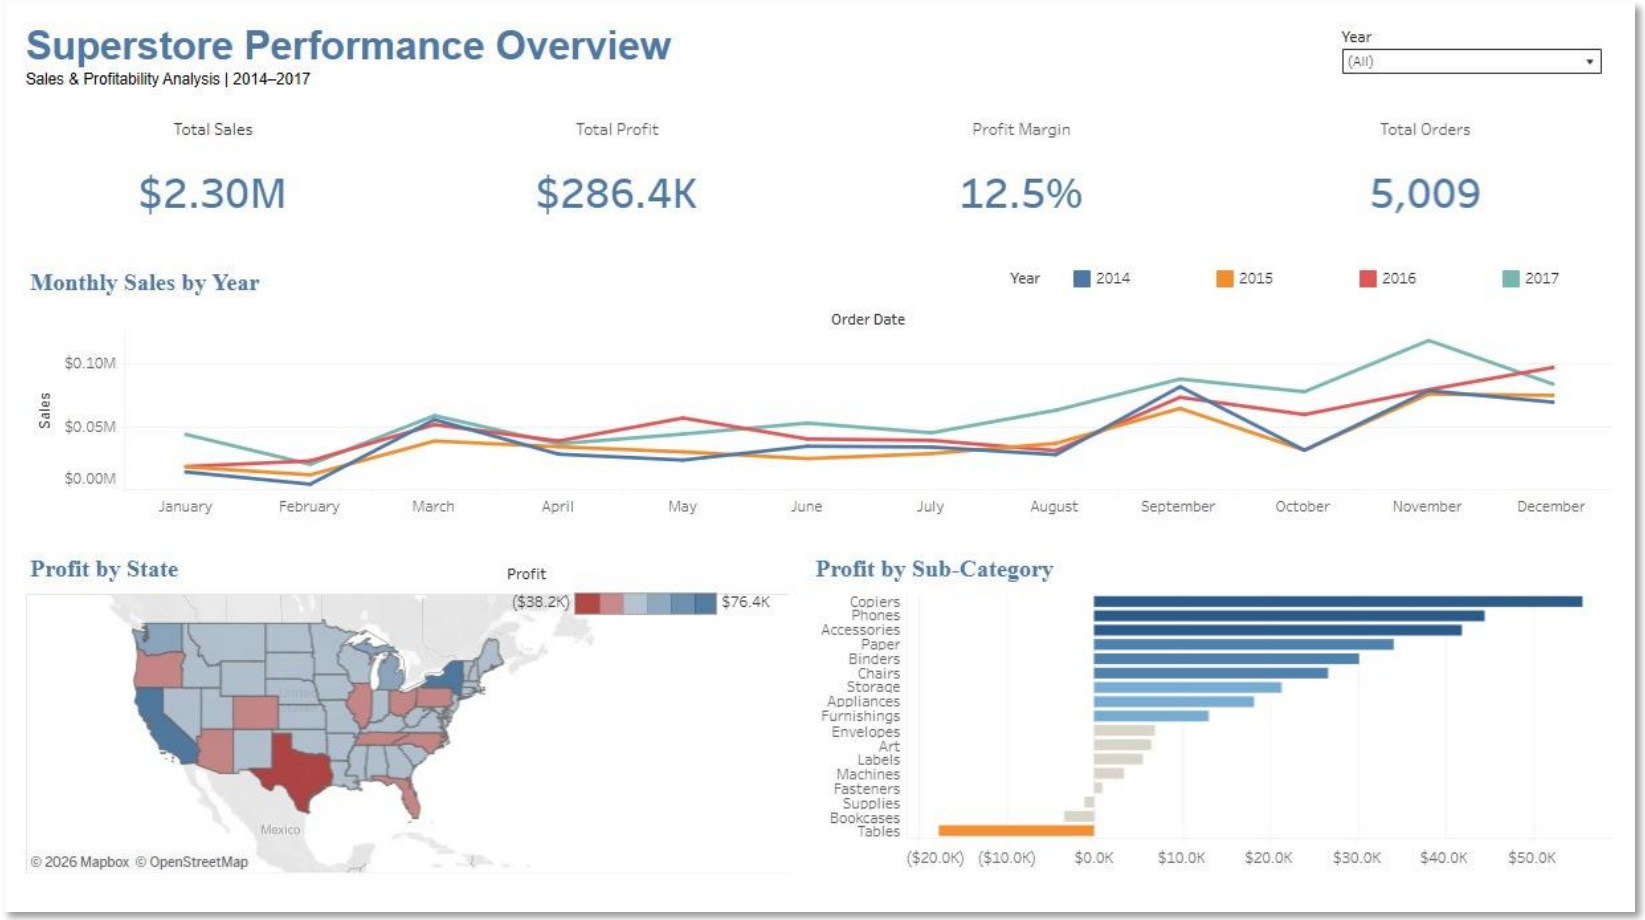

Superstore: Dashboard & Insights

Key Findings

- Copiers generated the highest profit at approximately $55.6K.
- Tables recorded the largest loss, approximately $17.7K.
- Profitability varied across states, showing that sales performance alone does not fully reflect business performance.

Recommendation

Review pricing and costs in loss-making sub-categories, especially Tables, and investigate states with negative profit.
